www.caeai.com 2 Fatigue Analysis in ANSYS There are two general categories of fatigue analysis: " Fatigue based on crack formation. " Fatigue based on crack growth. The choice of analysis type is based on the given application. " When in the design phase, or for components requiring only a few cycles of life, crack formation may be sufficient.

Abstract: Engine is the heart of aircraft, which makes other systems dependent on it for their proper function. This arises the situation to use an engine with high efficiency and reliability. In spite of all other types of engine, Gas turbine engine is the best suited one for modern transportation.

1. Introduction. Casing strings for oil and gas exploration and production are generally formed by threads. The use of threaded connection instead of welding is justified by the major productivity and the reversibility of the threaded connections 1.. Dynamic loading is common in connection service conditions.

Given a transformation between input and output values, described by a mathematical function f, optimization deals with generating and selecting a best solution from some set of available alternatives, by systematically choosing input values from within an allowed set, computing the output of the function, and recording the best output values found during the process.
