

heart sounds and murmurs pdf

Heart Sounds Quiz: this interactive quiz will test your ability to identify correctly the first and second heart sounds, extra sounds, diastolic and systolic murmurs in recordings of actual patients, using a computer animation of the carotid pulse for timing.

Blaufuss Multimedia - Heart Sounds and Cardiac Arrhythmias

Heart sounds are the noises generated by the beating heart and the resultant flow of blood through it. Specifically, the sounds reflect the turbulence created when the heart valves snap shut. In cardiac auscultation, an examiner may use a stethoscope to listen for these unique and distinct sounds that provide important auditory data regarding the condition of the heart.

Heart sounds - Wikipedia

Heart murmurs are heart sounds produced when blood flows across one of the heart valves that are loud enough to be heard with a stethoscope.. There are two types of murmurs. A functional murmur or "physiologic murmur" is a heart murmur that is primarily due to physiologic conditions outside the heart. Other types of murmurs are due to structural defects in the heart itself.

Heart murmur - Wikipedia

A heart murmur can present as a number of different sounds, frequently as a "rumble" or burble, and are differentiated according to which stroke of the heart they are associated with (e.g. systole (filling stroke) and diastole (ejection stroke), or whether they are continuous.
